TM STATS
Track to Improve

See exactly where your members lose shots

Strokes Gained golf stats from a phone. No sensors, nothing to buy.

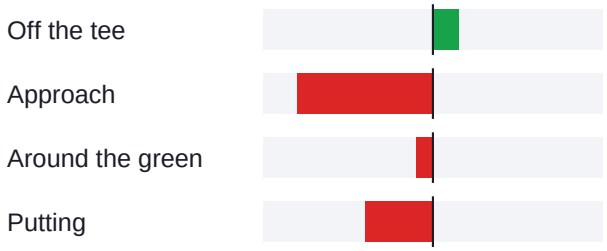

TM Stats is a golf stats app for club golfers who want to get better. It uses Strokes Gained, the same method the professional tours use, to show a golfer where their shots are really going: off the tee, approach, around the green or putting. Members log their rounds on their own phone after they play.

What a member does

- **Quick mode:** score, fairways, greens and putts for each hole. It takes a couple of minutes.
- **Full tracking:** each shot with its distance and lie. This unlocks the full Strokes Gained breakdown.
- After every round they get a one page breakdown by email, with the one thing to work on before the next game.

What they see

Example round: 6 handicap, shot 79

Left of the line is shots lost, right is shots gained, measured against golfers of the same level.

Most golfers blame the driver. The numbers usually point somewhere else.

In this round the driver was fine. Approach play cost 1.6 shots and putting another 0.8. That is two weeks of practice pointed at the right thing.

Members also get trends over time and coaching feedback written from their own numbers.

3 months free for your members

Scan the code, or go to:

tmstatsgolf.com/signup?ref=TMSTATS3FREE

The three months are applied automatically. No card needed.

After that it is £4.99 a month or £50 a year if they want to keep going.

For the club

- Nothing for the club to set up and nothing to pay.
- Pass the offer on in a members' newsletter, or pin this page on the noticeboard.
- Club professionals get a free coach account, with a dashboard showing the Strokes Gained numbers of every member who joins their team.

Rob Cull played NCAA college golf at Newberry College in South Carolina and county golf for Cheshire. He is a member at Bromborough Golf Club and built TM Stats.
